# Bitcoin — X Sentiment Outlook

*As of the 2026-11-03 UTC daily close · 9,497 filtered X posts over 180 days · news via Tavily*

## Verdict: **Neutral**

- Crowd tone on X has **deteriorated** week-on-week (7-day engagement-weighted score +0.342 vs +0.403), placing it at the **49th percentile** of the last 174 days.
- Price moved -4.3% over the same week, so sentiment and price are **moving together**.
- Attention (engagement) is below its average (z = -0.12); a quiet tape makes the sentiment reading less reliable.
- The model's central path is **-0.2%** by n+1 and **+0.5%** by n+5; the 80% band at n+5 is 71,951 – 84,047, i.e. the uncertainty is much larger than the predicted move.

| Metric | Value |
|---|---|
| Last close | $77,345 |
| 7-day / 30-day return | -4.3% / -10.6% |
| 7-day sentiment (engagement-weighted) | +0.342 (z = +0.02) |
| Bullish / bearish share of posts (7d) | 84% / 13% |
| Engagement vs average (z) | -0.12 |

**Model forecast — Ensemble (primary), sentiment + price**

| Horizon | Date | Forecast | 80% band |
|---|---|---|---|
| n+0 | 2026-11-04 | $77,261 (-0.1%) | $75,313 – $79,259 |
| n+1 | 2026-11-05 | $77,220 (-0.2%) | $74,406 – $80,140 |
| n+2 | 2026-11-06 | $77,303 (-0.1%) | $73,690 – $81,093 |
| n+3 | 2026-11-07 | $77,596 (+0.3%) | $73,222 – $82,231 |
| n+4 | 2026-11-08 | $77,630 (+0.4%) | $72,480 – $83,146 |
| n+5 | 2026-11-09 | $77,764 (+0.5%) | $71,951 – $84,047 |

**News backdrop (Tavily)**

> On October 30, U.S. spot Bitcoin ETFs recorded $643.3 million of net outflows, the largest daily withdrawal since June, erasing four straight sessions of inflows and leaving the week $202.4 million in the red. BlackRock's IBIT led with $233.7 million, followed by Fidelity's FBTC at $201 million and ARK 21Shares' ARKB at $129.5 million. This reversal came in the first full U.S. trading session aft…
